Using Flip in the Classroom

What is Flip?

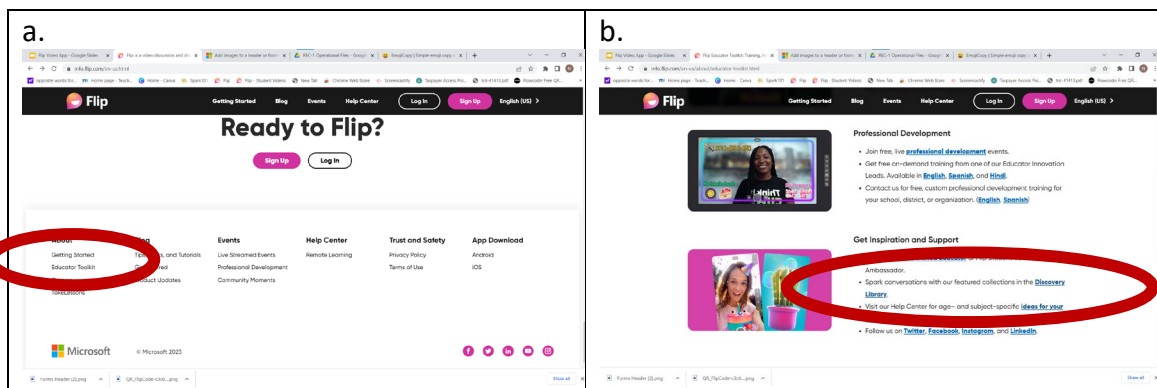

A video discussion and video sharing app that has a useful application in any classroom.

What is the URL for Flip?

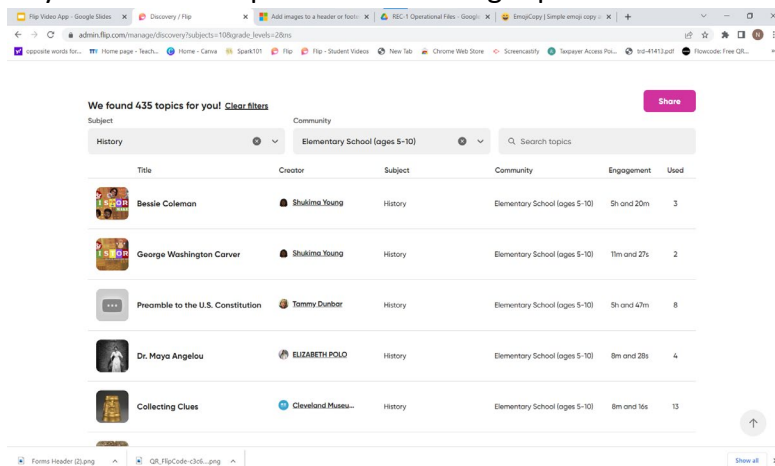

<https://info.flip.com/>

How can I use Flip?

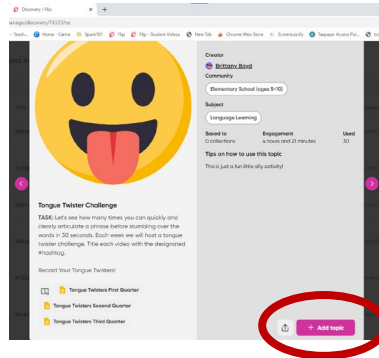

1. Check out the shared lessons to determine if the app is something you would use. Before you sign up, scroll to the bottom of the page. Under “About”, find “Educator Toolkit”^a and locate “Discovery Library.”^b

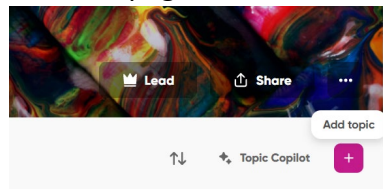

2. Scroll to the bottom of the page to filter the search by subject, community, and topic to fit your needs and preview interesting topics. Click on a title to review it.

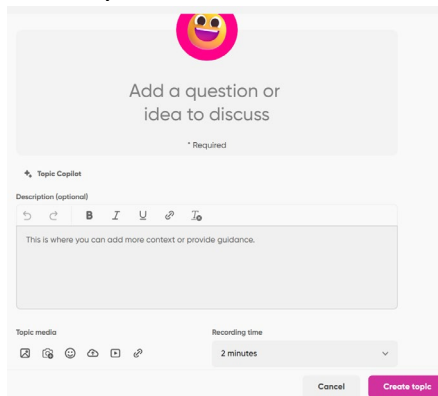

- Once you have created an account you can add a chosen topic to a group. It can be added to a previously created group or a new one.

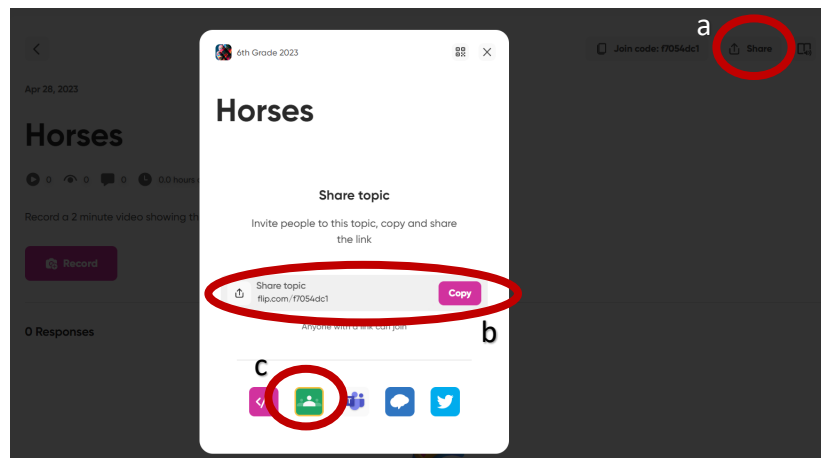

- If needed, you can create your own topic. Go to your home page and select the plus sign near the middle right-hand side of the page.

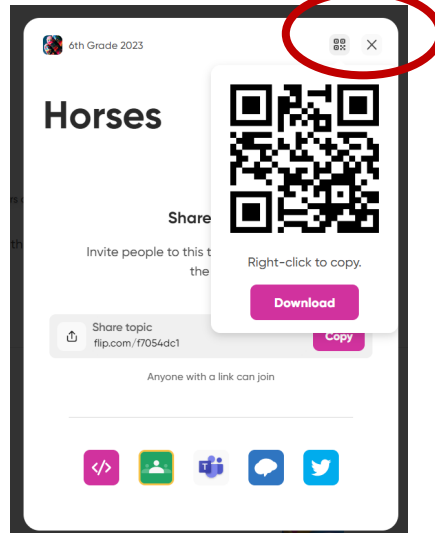

- Enter the information for the idea to discuss, a description, the time limit, and any documents, videos, links, etc. that you'd like to attach, then select create topic.

- Once your topic is created, you are ready to share it. Open the topic and select "Share"^a in the upper right corner. You can copy the link^b and send it by email. Another option is to send the link to your Google Classroom.^c

7. Probably the easiest option is to share the QR code. Students can scan the code with their device, and it will take them directly to the topic.

💬 Flip can be a fun way for your students to turn in assignments instead of paper and pencil. It will help them be more engaged in their lessons and it will help you get to know their unique personalities.

💬 Below is a list of pre-made topics to get an idea of how Flip can be used in any subject.
